

Full Feed 9933 Lamb NG

Full Feed 9933 Lamb NG Pellets are formulated to be fed to sheep in a feed lot environment and can also be used while joining, or to maintain growth rates and production in situations where forage quantity and/or quality is limiting.

Lasalocid sodium is included in the pellets to improve feed conversion efficiency and as an aid in the prevention of coccidiosis.

FEEDING RECOMMENDATIONS

Although this product has been formulated to be fed to sheep without needing additional roughage, it is suggested that during the introductory period sheep have access to good quality hay or straw *ad. lib.*

Introduce the pellets gradually, increasing the amount fed over two to three weeks, gradually reducing the amount of roughage on offer during the same period.

After the acclimation period the pellets may be fed *ad.lib* without any need for extra roughage, however animals must be monitored for signs of digestive problems daily. If digestive problems occur, reduce the amount of pellets being fed and introduce roughage until normal digestive activity resumes.

Pellets **must not** be allowed to run out otherwise digestive problems may occur.

Pellets and clean fresh water must be available at all times.
